

# INTEGRAL ELECTRONICS (IEPE) PIEZOELECTRIC ACCELEROMETER

## MODEL 2008A

- Outstanding Dynamic Range
- Wide Bandwidth
- Low Impedance Output
- Top Connector
- Stud Mounted

### Description

The VIP Sensors Model 2008A is a stud mounted piezoelectric accelerometer designed for shock measurements on structures and objects. It features a high signal-to-noise ratio, a high output sensitivity, and a wide bandwidth. The accelerometer transmits its low impedance voltage output through the same cable that supplies the constant current power.

The Model 2008A design is sealed against external contamination. Signal ground is connected to the outer case of the unit. When used with an isolated mounting stud, the accelerometer is electrically isolated from ground. The accelerometer features a 10-32 top connector that is used with coaxial cable for error-free operation.

VIP Sensors Signal Conditioner Models 5005, 5100 and 5102 are recommended for use with this low impedance accelerometer.

### NOTES

- Short duration shock pulses, such as those generated by metal-to-metal impacts, may excite transducer resonance and cause linearity errors.
